Abstract (en)
[origin: WO2016108025A1] The present application relates to a suspension member (1), comprising a housing and an attachment lug that are configured such that the suspension member is pivotable so as to engage or disengage with a groove of an insulation panel (2). The present application also relates to an insulating assembly, consisting of at least one first panel (2) and a suspension member (1), and to a method for insulating a wall (701, 702) of a room (700), wherein the suspension member (1) is connected to a structural element (4) then pivoted so as to engage with a rib of the first insulation panel (2). A second panel comprises a groove which is then capable of fitting around the housing of the suspension member (1).
