Abstract (en)
[origin: WO2016107816A1] The present invention concerns, according to one aspect, a line of reflectors for a concentrating solar power plant comprising a plurality of reflectors aligned relative to each other along an alignment axis and comprising a supporting structure (1000), characterised in that the supporting structure (1000) comprises at least one support configured to support the plurality of reflectors and comprising a foundation (1030) from which the at least one support extends, the foundation (1030) comprising: - at least one base (1010) comprising concrete or reinforced concrete, to be anchored in the ground; the foundation (1030) extending continuously along the alignment axis and all the way along the plurality of reflectors.
