Abstract (en)
[origin: WO2016109583A1] A method involves collecting analytics from mobile devices. The method may include receiving, by a device, a query message comprising a question identifier and a query, determining a query reply to the query, obtaining a device identifier for the device, generating a question-device hash using the question identifier and the device identifier, generating an anonymous response message comprising the question identifier, the query reply, and the question-device hash, and sending the anonymous response message to the analytics server.
