Abstract (en)
[origin: EP3241682A1] A recording apparatus (1) includes a transport belt (10) that transports a medium (P), a recording unit (7) that performs recording on the medium supported by the transport belt, a plurality of imaging units (18a, 18b) provided on an upstream side and a downstream side in a transport direction of the medium, and configured to shoot a moving object including at least one of the transport belt and the medium, and a calculation unit that calculates a distance travelled by the transport belt in a predetermined time, on a basis of a position of a part of the moving object in an image picked up by the upstream imaging unit of the plurality of imaging units, and a position of the part of the moving object in an image picked up by the downstream imaging unit of the plurality of imaging units, the predetermined time after the image pickup by the upstream imaging unit.
