Abstract (en)
A carton for packaging a plurality of articles includes a dispenser defined by a dispenser pattern extending through the carton's first side panel, top panel, second side panel, and exiting end panel. The dispenser is at least partially separable along the dispenser pattern to form an opening into an interior of the carton. The dispenser pattern includes first and second end dispenser patterns formed on respective first and second side exiting end flaps. Each of the first end dispenser pattern and the second end dispenser pattern includes a lower end section that overlies the bottom exiting end flap. These lower end sections define therebetween a bottom end portion of the removable section that is not adhered to the bottom exiting end flap.
