Abstract (en)
[origin: WO2017191002A1] The invention relates to a textile producing module (15) comprising a module body (16) and textile tools (17) secured to the module body. The module body (16) has a securing part (25) which has a first lateral surface (26) and a second lateral surface (27). At least one lateral surface (26) and/or (27) forms a securing region (30) with at least one support projection (47) and at least one support surface (48). In one embodiment, the support surface (48) can extend annularly about a securing hole (34) which passes through the securing part (25) and opens on both lateral surfaces (26) or (27). It is also possible to provide multiple support projections (47) and multiple support surfaces (48) in one securing region (30). One or more support surfaces (48) can form directly adjacent surface edges (60) in the circumferential direction (U) about the securing hole (34). The surface edges (60) have a maximum spacing (dmax) which is smaller than the smallest diameter (D1, D2) of the securing hole (34).
