Abstract (en)
"A machine for producing open bows (100) comprising a fixed clamp (30) designed to clamp the ends of two ribbons (11, 12), each wound in a respective spool (1, 2). The machine for producing open bows (100) also comprises two respective gluing material dispensing devices (40)(45). The machine for producing open bows (100) also comprises a movable carriage (20) on which a respective movable clamp (21) is fixed, the combination of translation movements (F3) along a first longitudinal direction (X) of the movable carriage (20) and rotations (R) of the movable clamp (21) around a respective rotation axis (AX3) integral with said movable carriage (20) is suited to create, on the ribbons (11, 12), joining lines ((GNT1), GNT2), (GNT3), (GNT4)) on which the gluing material is applied, when needed, by the dispensing device (40) so as to create the eyelets ((AS1), (AS2)) and the respective loops ((ANS1), (ANS2), (ANS3), (ANS4)) to obtain a complete bow (FCC). The loops ((ANS1), (ANS2), (ANS3), (ANS4)) are manufactured by compressing and gluing at least two joining lines ((GNT1), GNT2), (GNT3))."
