Abstract (en)

[origin: WO2018122025A1] The invention relates to a method for operating an electronically controlled pump assembly (1), wherein, in an electronic controller (6), setting parameters of the pump (2) can be adjusted to adapt to the hydraulic requirements of the local installation situation (4, 5). The operating data is recorded during the operation of the pump assembly (1). After a predetermined time, based on the recorded operating data, it is checked whether the pump assembly (1) has been set according to the factory default settings from start-up. If this is not the case, a signal (11) is output in order to call attention to the adjustments that are still required.
