Abstract (en)  
[origin: WO2016112245A1] The described invention provides an ex vivo model of persistent T lymphocyte stimulation events encountered by circulating T lymphocytes at lymph node and tissue levels in vivo; a method for optimizing donor selection for allogeneic blood and marrow transplantation (BMT) therapy; and a method for minimizing risks and maximizing benefits of performing allogeneic blood and marrow transplantation (BMT) therapy in a recipient subject, wherein the recipient subject has a hematologic malignancy.
