Abstract (en)  
[origin: WO2016110656A1] A logistics module (100) includes a base (101) and a pair of posts (108, 111) located on one side (102) of the base. A female fall prevention panel (122) is rotatably attached, on one of the sides thereof, to one (108) of the pair of posts. The female fall prevention panel (122) includes an attachment loop (132) located on a side opposite the side whereon the female fall prevention panel is attached to the post (108). A male fall prevention panel (123) is rotatably attached, on one of the sides thereof, to the other post (111) from the pair of posts. The male fall prevention panel (123) includes an attachment area (135) having self-fastening elements located on a side opposite the side whereon the male fall prevention panel is attached to the post (111). The male fall prevention panel (123) also includes an attachment strip (138) located so as to form an extension of the attachment area (135). The attachment strip (138) is capable of passing through the attachment loop (132). The attachment strip (138) has complementary self-fastening elements capable of interlocking with the self-fastening elements in the attachment area (135).
