Abstract (en)
[origin: CA2973054A1] System for managing the energy consumption of a building including at least one zone, comprised of sensors that are capable of generating information that represents environmental parameters, a set of at least one actuator capable of reacting to temperature and light in said zone, an associated computer system to receive said information released by said sensors, and to emit instructions to said actuators, a routing device connected to said computer system, sensors and actuators, a man/machine interface device in said zone, connected to said routing device and comprised of capabilities for displaying information from the computer system, capabilities for capturing information related to the configurations of the actuators and/or sensors present in the zone, and instructions for users in the zone.
