Abstract (en)
[origin: WO2016110748A1] The invention relates to a cable connector assembly comprising two electric power cables with multiple insulated electric conductors and a connector assembly that forms a releasable joint between the ends of the electric power cables, wherein the cable connector assembly comprises two end connectors on the meeting ends of the power cables, an intermediate connector between the end connectors, and a housing that receives the connectors, wherein the end connectors are aligned with their couplings towards the couplings of the intermediate connector and the housing surrounds at least these interlocking couplings.
