Abstract (en)
[origin: WO2016113173A1] The invention relates to a pivoting fitting (1, 1') comprising a first pivoting lever (2), which can be moved about an axis of rotation in relation to a second pivoting lever (3), wherein a blocking device (4, 4', 5, 5') is provided in order to block rotational motion of the first pivoting lever (2) in relation to the second pivoting lever (3) in a first direction of rotation and enable said rotational motion in an opposite second direction of rotation in a blocking position, wherein a switching element (10, 10') is provided for continuous adjustment of the blocking position in order to deactivate the blocking device (4, 4', 5, 5') for an adjustment process of the first pivoting lever (2) in relation to the second pivoting lever (3) in the first direction of rotation. Thus, the two pivoting levers (2, 3) can be blocked in one direction of rotation in all angular positions. At least one corresponding pivoting fitting (1, 1') can be used in a piece of furniture (100) or in a motor vehicle seat.
