Abstract (en)

[origin: US2016201159A1] A method for processing a dual phase steel sheet. The method includes heating the steel sheet to a first temperature (T₁), cooling the steel sheet to a second temperature (T₂), transitioning the steel sheet to a third temperature (T₃), and cooling the steel sheet to room temperature. T₁ is at least above the temperature at which the steel sheet transforms to austenite and ferrite. T₂ is below the martensite start temperature (Ms). The cooling rate to T₂ is sufficiently rapid to transform at least some austenite to martensite.
