Abstract (en)
[origin: WO2016113109A1] The invention relates to a post-beam construction comprising a support profile (1, 1', 1'') on which two grooves (2) are provided one on one side, on which a respective sealing strip (3) is secured, wherein a filling element (5) is held on the edge side on each of the sealing strips (3), and an intermediate groove (4, 4', 4'') to which at least one securing means (10) is secured for holding a contact pressure strip (6), in order to hold in place the two filling elements (5) by means of the contact pressure strip (6), wherein the intermediate groove (4, 4', 4'') has groove walls (45) accommodated between the sealing strips (3), and a contact plane of the filling elements (5) is arranged on the sealing strips (3) nearer to the contact pressure strip (6) than the groove walls (45) of the intermediate groove (4, 4', 4'').
