Abstract (en)
[origin: WO2016113575A1] A bracket (201) for supporting an individual on mesh fencing (50) is provided. The bracket (201) comprises at least one first fixing member (202) extending in a first direction in a first plane (P1) and a second fixing member (208) extending in a second direction in a second plane (P2). The second direction is opposite to the first direction. The bracket further comprises at least one support member (220) extending outwardly from at least one of the fixing members (202,208). The first plane (P1) is offset from the second plane (P2) such that in use the at least one first fixing member (202) lies on a first side of the fencing (50) and the second fixing member (208) and support member (220) lie on a second side of the fencing. A support structure which incorporates a pair of the brackets is also provided.
