Abstract (en)  
[origin: WO2016112929A1] Stand-up displays, in particular stand-up display figures, are often used as decoration, but can also be designed as toy figures. The fold process for producing the stand-up display can be as complicated as same is complex. A further disadvantage can be seen in that stand-up displays are generally have limited use. The invention provides a stand-up display which is easy to produce and can be used in a flexible manner. This is achieved in that the stand-up display, according to the invention, consists of at least one first blank (13) and at least one second blank (14, 39), wherein the first blank (13) can be folded to a base element (11) which has two transverse sides (27), two longitudinal sides (15), a stand side (18) and a receiving side (28). In addition, the second blank (14, 39) can be inserted on the base element (11) as an insertion element (12) to stabilise the base element (11).
