Abstract (en)

[origin: WO2016113238A1] A plug connector part (1) comprises a plug-in housing (20) which has at least one plug-in section (20, 21) which can be connected, in a manner inserted in an insertion direction (E), to a mating plug connector part (4) in order to establish electrical contact between the plug connector part (1) and the mating plug connector part (4). In addition, the plug connector part (1) has a compensation device (3) which is arranged on the plug-in housing (2) and which has a housing (30, 31), a carrier element (33) which is connected to the plug-in housing (20) and is arranged on the housing (30, 31), and a spring element (32) which prestresses the carrier element (33) in relation to the housing (30, 31), wherein the carrier element (33) can be moved relative to the housing (30, 31) with elastic deformation of the spring element (32). In this way, a plug connector part is provided which allows reliable compensation of position and/or angular deviations in relation to a desired position and a desired angle when said plug connector part is fitted to an associated mating plug connector part in a simple and cost-effective manner.
