Abstract (en)  
A tool that allows constant and regular leveling of a concrete layer or the like in construction work, characterized in that it comprises: - a fixed part (10) intended to be placed against a reference surface (M) with respect to which the required leveling is established; - a movable part (11), movable with respect to the fixed part (10) able to move along the body of the fixed part (10) from a rest position up to a position of maximum stroke and configured to adjust and define a required leveling height (L), the movable part (11) is associated with a straightedge (S) to be able to achieve the leveling of concrete layers or the like; - locking means (12, 13) of the movable part (11) to the fixed part (10) in the position that defines the required leveling height (L).
