Abstract (en)

[origin: WO2016085378A1] The invention relates to a method and a system adapted to the ordering of items from a merchant to a specific location through a coded tag (14) and a cellular device (10). A customer's cellular device (10) reads a quick response code (14) placed on or adjacent to the item, the code comprises information about the item, and a coded identification identifying the merchant that provides said item. The cellular device (10) transmits the ordering of the item to a system for that purpose, ordering the item through a one way communication from the customer to the merchant by the cellular device (10), whereby the system informs the merchant of the ordering of the item, and delivers it to the location of request.
