Abstract (en)
Present invention relates to a container with flexible element containing a pressurised container, spring, collecting tube and top, wherein the flexible element (2) is connected to the pressurised container (1), in which the flexible element (2) is formed by a base (26) and body (22), or is formed by a base (26) and spring (21), or by a base (26) and body (22) containing a spring (21), in which the base (26), body (22) and spring (21) adjoin to the inner walls of the pressurised container (1), and/or the flexible element (2) is furnished with at least one sealing element (33), which is inserted at the edges of the base (26) for preventing the penetration of liquid above or below the base (26), in which the body (22) of the flexible element (2) is made of a material with memory and/or rubber and/or plastic and/or textile, and the pressurised container (1) also contains a head (29), in which the head (29) of the flexible element (2) or pressurised container (1) is furnished with a securing top (25) and a catch (27) created in the base (26) of the flexible element (2) in order to secure the position of the base (26), in which the head (29) further contains a hole (251) for inserting the securing top (251) or stopper (30), in which the head (29) of the flexible element (2) or pressurised container (1) contains an outlet hole (231) with a neck (23) and release valve (24) controlled by a lever (241) and spring (242).
