Abstract (en)

The subject of the invention is a mould insert with extended service life for forming stampings by means of the press-moulding method, especially stampings from refractory materials supplied in the form of refractory powders or granulates, whereas said insert constituting one of side wall linings of the mould cavity is made of alloy steel in the form of a cuboidal solid characterised in that its outer working surface (3) is joined inseparably with metallic coating (4) with thickness  $g = 0.2\text{--}0.4$  mm and hardness 2750-2785 HV, and the coating contains in its composition 86-90% by weight of tungsten carbide and 10-14% by weight of cobalt
