Abstract (en)  
[origin: CN107413804A] A washing device comprises a wash chamber housing surrounding a wash chamber; the wash chamber housing is provided with an inlet which can be closed and locked by an inlet door; the wash device also comprises a moving system installed inside the wash chamber and a driving device used for the moving system. In this way, the washing device is improved to make it suitable for use in a clean room. It is proposed that the wash chamber housing and the wash device used for the moving system are installed inside the inner space of the housing; the inner space is connected with an exhaust air duct. The exhaust duct discharges air from the interior space of the outer housing at least during operation of the washing device.
