Abstract (en)
[origin: WO2016119025A1] An over-the-shoe dancing apparatus enables improved positioning and secure placement of taps. The apparatus comprises an elastomeric slipper for receiving a shoe wherein the slipper includes a longitudinal axis, an underside, a toe portion and a heel portion; at least two taps attached to the underside of the slipper; and an intermediate layer positioned between at least one of the at least two taps and the underside of the slipper; wherein a first tap of the at least two taps extends at least equal to a forward most point along the longitudinal axis of the toe portion of the slipper and a second tap of the at least two taps extends at least equal to a rearward most point along the longitudinal axis of the heel portion of the slipper.
