Abstract (en)
[origin: WO2016120712A1] The invention relates to a movable decorative element, intended for being freely rotated and translated between two walls (5, 6), the inner surfaces of which are parallel to one another, at least one of which is transparent, wherein said decorative element comprises a precious or semi-precious stone (2) mounted in a socket (1). The socket (1) comprises a closed bottom (4), the outer surface of which is rounded in order to promote the rotation of the decorative element when said rounded outer surface (7) abuts against the inner surface of one of said walls, and an open outer surface (7) opposite the bottom (4) which is flush with or projects relative to the stone (2) in order to form a bearing surface against the other one of said walls (5, 6) when the decorative element is arranged between the two walls. The precious or semi-precious stone (2) is held in the socket (1) thereof by a plurality of arms (3) which extend above a body (8) of the socket (1) and which set the stone (2), said arms (3) leaving lateral openings (9) between same and above the body (8) of the socket (1), said openings allowing the sides of the stone (2) to be seen between the arms (3), and said bearing surface being made up of the free ends of said arms (3) in the form of separate contact areas separated from one another around the periphery of the open outer surface (7) of the socket (1).
