Abstract (en)
[origin: WO2016118999A1] Disclosed is a ski (1), in particular a cross-country ski, comprising a gliding surface layer (3); in a central region (7), especially in a grip zone, the gliding surface layer (3) has at least two groove-type depressions (8) for attaching a traction element (11) each. According to the invention, two groove-type depressions (8) are provided that are substantially next to each other, and a front end (9) and/or rear end (10) of one groove-type depression (8) is located at a distance from the front end (9) and/or rear end (10) of the other depression (8) in the longitudinal direction of the ski (1).
