Abstract (en)

[origin: WO2016119799A1] The invention relates to a can closure (1) for inserting into a can lid (2) of a can, in particular a milk can which is heated when sterilizing the can contents, comprising a pour opening (10) for pouring a liquid out of the can and a tamper-proof element (12) which seals the pour opening (10) in the original state and which can be broken open in order to release the pour opening (10) for pouring purposes. The invention additionally relates to a pressure partition (14) which seals the pour opening (10) on the inner face of the tamper-proof element (12) and thereby keeps the internal can pressure away from the tamper-proof element (12). The pressure partition (14) can be broken open in order to release the pour opening (10) for pouring purposes.
