Abstract (en)

[origin: WO2016173721A1] The present invention relates to an apparatus for filling and closing containers. The problem of the present invention is to develop an apparatus for filling and closing containers such that the risk of the apparatus being contaminated by spilled contents is effectively prevented. This problem is solved by an apparatus for filling and closing containers which comprises a first process wheel (1) for filling a container and a second process wheel (2) for closing a filled container and also a transfer device (3) for transferring the filled containers from the first process wheel (1) to the second process wheel (2). The transfer device (3) has a linear transfer route (4).
