Abstract (en)

[origin: WO2016119831A1] The present invention relates to a laundry machine (1) comprising a front door (2) handle (4) having an improved mounting mechanism. The invention more particularly relates to a laundry machine (1) comprising a rotary drum, in which the laundry is to be placed, an electric motor rotating the rotary drum and a front door (2) allowing access into the rotary drum for loading or unloading laundry through an access opening (3); the front door (2) having an outer frame (5) and an inner frame (6), the laundry machine (1) further comprising a handle (4) mounted to the outer frame (5) to effect locking and unlocking of the front door (1). An outer handle element (8) and an inner handle element (9) of the handle (4) are interconnected to each other in such a way that a handle engagement portion (7) of the door outer frame (5) is interposed between the outer handle element (8) and the inner handle element (9). The handle engagement portion of the door outer frame (5) works as an interconnection between the outer handle element (8) and the inner handle element (9) so as to fixedly secure the outer frame (5) of the door thereinbetween.
