Abstract (en)

[origin: WO2016119934A1] The present invention relates to a method for mounting a camshaft (1), wherein the camshaft (1) has a main shaft (10) on which at least two sliding cam pieces (11A, 11B) are accommodated in a rotationally fixed and axially displaceable manner, wherein the sliding cam pieces (11A, 11B) each have a carrier tube (12A, 12B) on which cam packs (13A, 13B) are positioned, each comprising at least two cam tracks (14) for valve control, and wherein an adjustment element (15) is provided which can be brought into operative connection with an actuator for the axial displacement of the two sliding cam pieces (11A, 11B). According to the invention, the method has at least the following steps in any sequence: – providing a module body (16) with bearing brackets (17A, 17B) for rotatable accommodation of the camshaft (1), – joining a first sliding cam piece (11A) into a first bearing bracket (17A), – connecting the first sliding cam piece (11A) to the adjustment element (15), – joining a second sliding cam piece (11B) into a second bearing bracket (17B), and – connecting the second sliding cam piece (11B) to the adjustment element (15) using an axial adjustment path of at least one of the sliding cam pieces (11A, 11B) in the bearing brackets (17A, 17B).
