Abstract (en)

[origin: WO2016120386A1] The present invention relates to a refrigerator (1) comprising a cabin (2) wherein the foodstuffs to be cooled are placed; at least one transmitter (3) that sends sound waves onto the air circulating inside the cabin (2); at least one receiver (4) that receives the sound waves sent by the transmitter (3) and a control unit (9) that calculates the mean temperature of the air through which the sound waves moves by measuring the time period that elapses until the sound waves sent by the transmitter (3) reach the receiver (4).
