Abstract (en)
[origin: WO2017207590A1] The invention relates to a rotary printing press (101) for printing on a material web (115), comprising a central cylinder (102) and a plurality of inking units (103-108), which are arranged around the central cylinder (102) and in each of which printing ink can be transferred onto the material web (115) by means of a printing drum (111). In order to increase the economic efficiency of a rotary printing press (101) for printing on packaging, the machine-side anchorings (114) of at least one printing drum (111) are designed in such a way that the printing drum (111) can be removed and the space occupied by the printing drum (111) can be released, and the released space can be fitted with an inkjet printing unit (201).
