Abstract (en)

[origin: EP3251858A1] A liquid discharge apparatus (1) includes a conveyor (210) to convey a medium; and a plurality of liquid discharge heads (220) arrayed in a conveyance direction of the medium. Each of the plurality of liquid discharge heads (220) includes head-side positioning portions (221) and the conveyor (210) includes conveyor-side positioning portions (212). The head-side positioning portions (221) and the conveyor-side positioning portions (212) are positioning portions to define a positional relation between the conveyor (210) and each of the plurality of liquid discharge heads (220). The conveyor-side positioning portions (212) correspond to the head-side positioning portions (221) of each of the plurality of liquid discharge heads (220) by movement of the conveyor (210) in the conveyance direction.
