Abstract (en)
[origin: CN107443928A] The invention relates to a device for printing a web formed by printing materials on a first and/or a second side, and the device comprises a printer that comprises at least two printing modules and an effect area assigned to the printer, so that a printing fluid can be transferred to the web by means of the printing modules in the effect area; a first guiding element that is used to guide the web along at least one first part of the effect area; a web turnover apparatus that is arranged behind the first guiding element in the web operation direction; a second guiding element that is arranged behind the turnover apparatus in the web operation direction for guiding the web along at least a second part of the effect area; at least one printing module is arranged to move relative to at least one of the two guiding elements, and/or at least one of the two guiding elements is arranged to move relative to at least one printing module of the printing modules.
