Abstract (en)

A base (1) of a heat pump system (100) and a heat pump system (100) for a drier or a washer-drier are provided. The base (1) defines an evaporator storage chamber (101) with a guide groove (11) formed in a bottom surface of the evaporator storage chamber (101); a drain port (12) is formed in a bottom surface of the guide groove (11) and is in communication with outsider space of the evaporator storage chamber (101); and the guide groove (11) is configured to guide condensate water to the drain port (12). For the base (1) according to the present invention, by providing the guide groove (11) in the bottom surface of the evaporator storage chamber (101), and by guiding the condensate water through the guide groove (11) to the drain port (12) and discharging the condensate water out of the base (1), it is possible to guarantee heat exchange efficiency of the heat pump system (100), shorten drying time and improve drying efficiency.
