Abstract (en)
[origin: EP3252318A1] A hydraulic accumulator includes a shell (2), a bellows (5), and a self-seal stay (8) disposed at t a hydraulic-fluid inlet (6) and including a cylindrical body portion (8a) and a lid-shaped head portion (8b) defining a through hole (81). The self-seal stay (8) includes a first weakened portion (9) for deforming the body portion (8a) when a pressure of the gas chamber (G) is more than a given threshold. The first weakened portion (9) includes a first recessed portion (91) formed in a circumferential direction of the body portion (8a). The first recessed portion (91) includes a bottom surface (91b) of a plane surface or a circular arc shaped curved surface which is convex toward outside of the body portion from inside thereof. At least one of both end portions (91c) of the bottom surface (91b) in the circumferential direction is joined with an outer circumferential surface of the body portion (8a).
