Abstract (en)

[origin: EP3252875A1] The present invention relates to an electrical connector assembly comprising a connector housing, a terminal position assurance member and an actuating member. The connector housing is adapted to receive an electrical terminal. The terminal position assurance member is adapted to be mounted to the connector housing and being movable relative to the connector housing between a pre-lock position and a final-lock position in mounted position. The actuating member is adapted to be mounted to the connector housing and being movable relative to the connector housing between a first position and a second position in mounted condition.
