Abstract (en)

[origin: WO2016126840A1] A method and apparatus for forming chips, for example, pita chips, from a continuous mass of dough. In a first aspect, the apparatus comprises a first conveyor, a second conveyor, and a first trimmer. The first conveyor and the second conveyor are spaced apart a distance to form a gap. The first trimmer, which can comprise a liquid jet nozzle, is positioned above the gap. In a second aspect, the method comprises using a first conveyor to convey a continuous mass of dough to a first trimmer positioned over a gap between the first conveyor and a second conveyor. The method also comprises using the first trimmer to longitudinally trim a first portion of the continuous mass of dough to form thinner strips of the continuous mass of dough. The thinner strips can be integral with the first portion.
