Abstract (en)
[origin: WO2016124848A1] The apparatus for dispensing strips of a flexible material packaged on a reel and having, at regular intervals, tear lines for constituting the strips, said apparatus comprising a receiving housing (1) for receiving said reel (B), said housing (1) having a circular opening (1a) for the passage and dispensing of a strip under a pulling force, comprises at least one washer (3) attached to the housing (1) in a manner concentric to the dispensing opening (1a), the internal diameter of the at least one washer (3) being less than the diameter of the opening (1a), said washer or washers (3) being made from an elastomer material capable of being deformed under the effect of the dispensing of material via said opening (1a) in order to concomitantly result in the cutting of a strip along a tear line, said washer or washers (3) cooperating with a manually actuatable element (7) arranged to reduce, as desired, the inner diameter of the washer or washers (3).
