Abstract (en)

[origin: WO2016127148A1] Interactive systems and methods for creating game and game-like applications, including a side challenge application for building a head-to-head challenge between users, are presented. The first user selects the second user that is a target of the challenge. The first user then selects a fantasy performer, a performance goal for the fantasy performer, a challenge time period, and a challenge wager. The challenge is presented to the second user whom accepts, rejects or proposes a modification to the challenge. A result of the challenge is scored and reported to both of the first and second users. The fantasy performer can include a single player or entity, an entire roster or multiple players.
