Abstract (en)

[origin: GB2534907A] A rotary tool holder assembly (2) having a tool receiving bore 34 and a gripping means, the gripping means comprising at least one tool gripping arm 32 mounted on the outer rim support 31 and is movable relative to the rim between a gripping position, in which off centre sprag forces can act on a carried tool, and a release position. The gripping means also comprises at least one wedge portion 41 arranged to act on the gripping arm and for axial movement relative to the outer rim support. Axial movement of the wedge portion in the first direction moves the gripping arm towards the gripping position. The gripping means also comprises biasing means 5 for biasing said wedge portion towards the first direction. A movable mass portion may also be included, arranged to move under action of centrifugal forces and so move the gripping arm into a gripping position.
