Abstract (en)

[origin: CN107405768A] A portable tool stand (10) having automatically deployable legs (26). The tool stand (10) has a body (12) with a work surface and opposed ends. Deployable legs (26) are pivotally mounted to the tool stand (10). The legs (26) move between a stored position adjacent to the body (12) and a support position wherein the legs (26) are deployed to support the body (12). Retractable arms (22) are mounted to each end of the body (12) and slide with respect to the body (12). The deployable legs (26) and the arms (22) are operably connected such that sliding the arms (22) with respect to the body (12) moves the legs (26) between the stored position and the support position.
