Abstract (en)

[origin: WO2016124622A1] The invention relates to a securing ring for a pressurized dispenser fitted with a valve and with an interior pouch. The securing ring is equipped with a central part (31), on the exterior face of which a pouch is secured and the diameter of which is smaller than the diameter of the opening (12) of the container, and with a flange (32) for securing the ring between the edge of the opening (12) of the container and the peripheral edge (231) of the valve cup. The ring is further equipped on its exterior face, between the central part (31) and the flange (32), with at least one passage (361), the passage or passages (361) being dimensioned such that when the ring is placed in the opening (12) of a container with its passage or passages situated level with the edge of the opening (12) of the container, the passage or passages extend on both sides of the edge of the opening (11) and each form a path placing the part of the exterior face of the ring that is situated on the outside of the container in contact with the part of the exterior face of the ring that is situated on the inside of the container.
