Abstract (en)

[origin: EP3255187A1] A double-sided fabric stacked with a continuous cord material in a predetermined stitching section is provided. The double-sided fabric is stitched from a face yarn (20) by a flat knitting machine including a front needle bed, a back needle bed and a loop presser bed. The front needle bed includes a plurality of front knitting needles (A to E). The back needle bed includes a plurality of back knitting needles (a to f). The loop presser bed is disposed above the front needle bed or the back needle bed, and includes right-directed pressing pieces (aA, bB, cC, dD and eE) and left-directed pressing pieces (Ef, De, Cd, Bc and Ab). The double-sided fabric is further embedded with a continuous cord material (100), which is pressed into the predetermined stitching section by the right-directed pressing pieces (aA, bB, cC, dD and eE) and the left-directed pressing pieces (Ef, De, Cd, Bc and Ab) to become folded and stacked in the predetermined stitching section.
