Abstract (en)

[origin: EP3255351A1] The invention relates to an actuator attachment (1) for actuating a valve, in particular a radiator valve. The actuator attachment (1) comprises an actuator section (2) as well as an adapter (3). The adapter (3) is unrotatably coupleable to the actuator section (2) in a plurality of discreet relative rotational positions. Task of the invention is to provide an actuator attachment that allows to adjust the rotational position of the actuator attachment after installation and that can be easily mounted to and demounted from a valve. According to the present invention the above task is solved in that the adapter (3) is unrotatably coupled to the actuator section (2) when the actuator section (2) is rotated in a first rotational direction and is rotatably coupled to the adapter (3) in an opposite, second rotational direction.
