Abstract (en)
[origin: WO2016128431A1] The invention relates to a container with a childproof lock, said container having a container opening. The container comprises a container closure for the container opening, said container closure being movable from a closed position into an open position, and the container also comprises a removable tamperproof element. A childproof lock is paired with the container closure, said childproof lock comprising an actuation element. The invention is characterized in that the tamperproof element blocks a movement of at least one portion of the actuation element, and after the tamperproof element has been removed, at least one portion of the actuation element can be moved from a first position, in which the container closure is secured, into a second position, in which the container closure is not secured.
