Abstract (en)

[origin: CA2971954A1] The invention relates to a joint-sealing tape, comprising an elongate carrier and at least two separate sealing elements of predetermined width, which are arranged on one side of the carrier in such a way that the sealing elements extend in a carrier longitudinal direction at a distance from each other and adjacent to each other and which each have two opposite broad sides and two narrow sides, which extend transversely to the broad sides and connect the broad sides, wherein the sealing elements are arranged on the carrier by means of one broad side, wherein the sealing elements are each firmly connected to the carrier only over part of the broad side thereof. The invention further relates to a sealing assembly for sealing construction joints, in particular for sealing against sound and/or smoke and optionally against fire, comprising such a joint-sealing tape.
