Abstract (en)
[origin: CA2971960A1] The invention relates to a joint-sealing tape for sealing a joint between a first component and a second component, comprising an elongate carrier and at least two separate sealing strips, which have a round cross-section and which are arranged on the carrier in such a way that the sealing strips extend in the carrier longitudinal direction at a distance from each other and adjacent to each other. The invention further relates to a sealing assembly for sealing construction joints, in particular for sealing against sound and/or smoke and optionally against fire, comprising such a joint-sealing tape.
