Abstract (en)
Window sill assembly comprising a frame and a window sill, wherein the assembly is provided so as to extend over an outside wall and at least a part of a cavity wall, wherein the window sill is movable relative to the frame in order to provide access to the cavity wall in a first position of the window sill, wherein the frame comprises at least a rear segment and two side segments which are each compatible with the window sill in a manner such that in a second position of the window sill connections between frame and window sill bring about draining of the window sill assembly in the direction of an outer side of the outside wall.
