Abstract (en)  
[origin: WO2016133454A1] A three dimensional bending wooden veneer (1 ) for a home furnishing object has a front side (2) adapted to be visible in the final home furnishing object, and a back side (10) adapted for mounting the veneer (1 ) to a support layer of the home furnishing object. The veneer (1 ) has a veneer thickness (VT) of 0.5 to 2.5 mm. Parallel recesses (12, 14, 16, 18) are formed in the back side (10) of the veneer (1 ) to such a recess depth (RD) that a remaining thickness (RT), which is that part of the veneer thickness (VT) that remains after making the respective recess (12,14, 16, 18), is 0.02-0.3 mm. The invention comprises also a method of producing such a veneer and an apparatus for producing such a veneer and a method of producing a home furnishing object.
